

Ceramic Lined Mill Discharge Valve

Hofmann CERATUFF has various application like Bends, Pipe, Cyclone, Classifier, Chutes, Hopper, Inner Cone, Pump Sleeve, Orifice, Nozzle, Venturi Outlet, Pump Impeller, Mill Discharge Valve etc.

Hofmann offers CERATUFF High Alumina ceramic lined equipment for highly wear prone application such as Coal Fired Power Generation, Mining, Cement, Steel Making and Mineral processing Industries.

Hofmann offers product designed to meet exacting requirement in cost effective manner. The choice of High Alumina Product ensures excellent wear and corrosion resistant properties. Our Engineers are available for customer service for application development including material selection, Lining Design, Fabrication and Installation. Alumina shape and size shall be designed to suit the final application of the equipment. The installation of the liner shall be done by high alumina based wear resistant bonding material and/or welding.

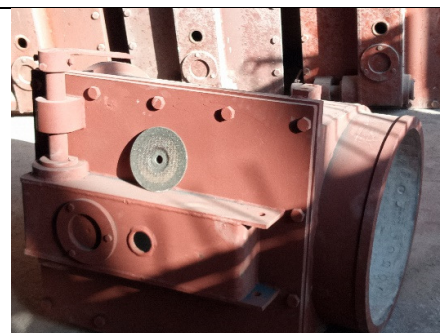

The hardness of CERATUFF high Alumina Liner is next diamond which ensures extremely hard and wear resistant material. It can last longer than any other conventional material by more than 10 to 20 times. In addition it retains its wear resistant properties at high temperature. CERATUFF is inert to all most all chemicals and thus providing excellent corrosion resistant properties against chemicals.

FEATURES:

- CERATUFF is cost effective in the long run in various application
- MINIMISE down time, maintenance and product cost.
- MAXIMISES Productivity, Performance and Profit.
